

ANDERSON GROUP

ENVIRONMENTAL STRATEGY STATEMENT

With the diversity of operations within the company this is to be considered a base document which when required allows the flexibility for each individual project to develop its own specific Environmental Controls dependent upon particular impacts of each project undertaken.

The Group will continue to promote the conservation and sustainable use of natural resources, to minimise environmental pollution in all its activities and through its influence over others. It will review all its policies, programmes and services and will undertake wherever necessary to improve environmental standards to the benefit of the community as a whole.

The Group will implement the necessary training required to ensure compliance with the Environmental Policy by the companies workforces.

The Group will ensure that subcontractors working for the company are made aware of the Environmental Policy and the requirements for its implementation.

Pre Construction Procedures

- Maintain an energy conservation policy to reduce the consumption of non renewable resources.
 - Recognise and implement recycling initiatives by whatever means practical to achieve substantial increases in the re-use of waste materials
 - Purchase items using recycled materials wherever possible and practical.
 - Only buy products which use non-renewable resources, if suitable equivalents are not available, wherever practical.
 - Avoid the purchase of any product, the production, or use of which, pollutes the environment or control the use of such products to minimise their environmental impact.
 - Extend the training programme of the company to include elements which educate the staff, contractors and others in environmental protection and ecological matters.
 - Take part in a programme of meeting on at least a quarterly basis with voluntary environmental and business groups to ensure a continuing dialogue and awareness of local and national issues
 - Produce an environmental plan for each project
- Identify and control local site specific environmental impacts by conducting impact assessments for each project.

Construction Procedures

Endeavour to control emissions of:

- Dust
- Noise
- Airbourne Pollutants
- Waterbourne Pollutants
- Waste Arisings

If during the course of the works activities any material suspected of containing asbestos, or any other toxic substance, is discovered advice will be sought to assess the requirement for safe removal and disposal. The use of pesticides, herbicides and other toxic materials specified by the client will be closely monitored and controlled, less damaging alternatives, if available, will be proposed.

The disposal of waste material from whatever source, including packaging, will be strictly controlled.

Mr Steve Evans
Health & Safety Director
